## Bed Bug Treatment Preparation Instructions

In order to achieve desired results for bed bug removal, it is vitally important that the homeowner prepare for our treatment in the following ways:

- 1) Pick up everything from the floor. If the items are clothes, wash them at 120 degrees or higher in order to kill the bed bugs. If you wash them prior to the service date they must be sealed in an area that bugs cannot get in. Such as trash bags tied. etc
- 2) Remove all the bed covers and wash them at 120 degrees or higher.
- 3) Move all the bedroom furniture away from the walls leaving room for the technician to treat behind those areas.
- 4) Vacuum the area prior and after the treatment is performed concentrating on the edges of the area where the walls meet the floor. Discard the bag inside your vacuum cleaner.
- 5) Remove all drawers from the night stands and dressers.

If you have any questions regarding these instructions, please feel free to contact Pioneer Pest Management at 314.822.1191
